## Space Law in The Era of Globalization

Thursday, January 18, 2007  
10:00 am – 4:00 pm  
Moot Court Room 1  
Lamar Law Center

The National Center for Remote Sensing, Air and Space Law at the University of Mississippi School of Law and the *Journal of Space Law* has brought together some of the world's leading space lawyers to discuss the current status of space law and its emerging challenges and opportunities in a one day roundtable discussion titled, *Space Law: the Era of Globalization*.

The purpose of the event is to have a focused, frank, informed, and, hopefully enlightening, discussion about space law. The nominal starting point for the discussion will be some of the points raised in "*Space Law: Its Cold War Origins and Challenges in the Era of Globalization*" 37 Suffolk U.L. Rev. 1041 (2004).

In addition to questions and subjects prepared by the moderator, the panelists have submitted topics or materials that they would like to have raised. They have been compiled and will be included into the discussion. The event will be web cast and recorded for later transcription.

It is anticipated that some of the topics raised will include:

- Efficacy of the current treaty regime;
- The U.S. national space policy;
- Newly emerging space faring nations;
- Legal aspects of the Space Exploration Initiative;
- Space tourism;
- Peaceful uses of outer space; and
- Earth observation data access policies.
